### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-6, 8 are rejected under 35 U.S.C. 102(e) as being anticipated by Hirata et al (PN 6,738,398).

Regarding claims 1, 3, 6, 8,

Figure 26 illustrates a modulation light source including a DBR laser with a DBR part (13), a phase part (12), a gain part (11), a wavelength conversion device (20) and a control means (31). Column 16, lines 30-36, discloses modulating the DBR part and the phase part and constant current to the gain part. Column 20 lines 44-47, discloses pulse width modulation [applicant's PWM].

Regarding claims 4, 5,

Column 20 lines 44-52, discloses using the modulation light source of figure 26 in a laser printer, which includes a light deflector (303) and a photosensitive member (305), as illustrated in figure 32.

### ***Claim Rejections - 35 USC § 103***

Art Unit: 2828

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hirata et al (PN 6,738,398) in view of Kondo Kentaro (JP1-183180).

Hirata et al does disclose modulating the DBR part, but is silent as to the phase part having a constant current.

However, applying constant currents to a phase part is well known in the art, as disclosed by Kondo Kentaro.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ARMANDO RODRIGUEZ whose telephone number is 571-272-1952. The examiner can normally be reached on 9:00 AM - 5:00 PM.
